19:30 UK	Event ends	

*all times are approximate

[Chitetezo](#) is a multifaceted, arts-mediated, rights-based advocacy intervention designed to decrease the frequency of road traffic collisions.

It is founded on evidence from three previously unconnected areas: rights-based youth work, road safety education, and intergenerational approaches to co-producing local development. There are good theoretical grounds for taking an intergenerational approach to learning and education in the co-production of community-based solutions. The research seeks to draw on young people's own expertise to co-produce solutions to road safety.

This research is jointly funded by the [UK Medical Research Council \(MRC\)](#) and the [Foreign Commonwealth and Development Office \(FCDO\)](#) under the [MRC/FCDO Concordat agreement](#), together with the [Department of Health and Social Care \(DHSC\)](#)
